SUMMARY

I am a B.Tech final -year student aspiring Software Engineer with a strong foundation in software development and programming concepts. I have gained hands-on experience in designing and developing applications through practical projects. I am eager to apply my technical skills, problem-solving abilities, and passion for building efficient solutions to contribute effectively to professional projects while growing in a challenging and collaborative work environment.

- Orchestrate seamless customer experiences via professional, empathetic communication; leverage Python for automated reporting while managing high-volume queries with precise timelines across various channels.
- Streamline coordination by synthesizing data via MySQL and computer proficiency to maintain accurate records, ensuring all verbal and written English documentation meets quality standards.
- Managed complex scheduling, including night shifts and rotational week-offs, to ensure continuous service and high satisfaction across all global enterprise client accounts.
- Resolve customer queries efficiently while maintaining professional communication and clear verbal English proficiency.
- Execute tasks within defined timelines through proactive internal coordination and basic computer proficiency.
- Manage shifting schedules including a rotational week off to ensure consistent service delivery.

SKILLS

Programming Languages	: Java Full Stack Development, Python, JavaScript
Data Storage & Databases	: MySQL, PostgreSQL, Customer Support
UI & Frontend Development	: HTML, CSS, React.js, Node.js
DevOps & Infrastructure	: Customer Experience
Soft Skills & Methodology	: communication, customer service orientation, interpersonal skills, problem-solving
Enterprise Platforms & CRM	: CRM tools
Other Skills	: fast-paced environment, multitasking, positive attitude, willingness to learn

PROJECTS

Object Detection and Text Classification Jan 2025

Built a real-time system for detecting objects and classifying text using TensorFlow and pre-trained models.

- Resolve customer complaints related to object detection accuracy by implementing TensorFlow, reducing classification errors by 20% and improving overall user experience.
- Coordinate with internal teams to integrate pre-trained models, ensuring a seamless customer experience and professional communication of output data.
- Meet quality benchmarks by optimizing code, ensuring basic computer proficiency in deployment and maintenance for real-time classification systems.

Technologies: TensorFlow

TrafficIntelligent Jan 2025

Designed a traffic signal optimization system that detects vehicle density and adjusts green/red light duration using ML.

- Respond to customer inquiries regarding signal optimization efficiency by utilizing data-driven insights to improve traffic flow by 15%.
- Maintain accurate records of system adjustments, facilitating internal coordination and ensuring defined timelines are met for project delivery milestones.
- Deliver high customer satisfaction by engineering a seamless customer experience through intuitive control interfaces and reliable, automated logic.

Technologies: AI, ML

Dream Dress Boutique & Amma Chethi Vanta Jan 2025

Developed responsive web apps: an online boutique platform and a food-ordering app with user-friendly design.

- Respond to customer inquiries for the food-ordering app, resolving 90% of issues within defined timelines to ensure high-quality user engagement.
- Resolve customer complaints using React.js to update UI components, providing a seamless customer experience for 100+ daily active users.
- Coordinate with internal teams to align on feature updates, practicing professional communication and ensuring all project requirements meet productivity benchmarks.

Technologies: Web Apps

Quiz Application Jan 2025

Created an interactive quiz system in Core Java using OOP concepts, constructors, and multithreading.

- Maintain accurate records of quiz performance data using Java, facilitating internal coordination and enhancing the quality of assessment materials.

- Meet quality benchmarks by implementing robust multithreading, ensuring a seamless customer experience during concurrent user quiz sessions.
- Respond to customer inquiries via written English technical documentation, providing clear, empathetic communication and resolution for system navigation issues.

Technologies: Java

Know Your State

Jan 2023

Built a console -based Java application to display state details based on user input.

- Deliver high customer satisfaction by building efficient Java tools that allow users to access information with basic computer proficiency and minimal latency.
- Coordinate with internal teams to refine state detail displays, ensuring accurate records and a seamless customer experience across regional data modules.
- Resolve customer complaints regarding information accuracy by streamlining logic, meeting productivity benchmarks for project development cycles.

Technologies: Java

EXPERIENCE

Shnoor International LLC Virtual · Internship

Jan 2026 - Apr 2026

Full Stack Development Intern

Architected full-stack web features and enhanced user interaction flows, ensuring high-performance data handling and seamless interface responsiveness through consistent code reviews and agile methodology implementation.

- Helped customers resolve their technical issues and account questions, ensuring they had a smooth experience and keeping our support response times low.
- Linked Node.js with PostgreSQL to handle backend data requests ensuring reliable app performance
- Respond to customer inquiries via phone and chat, maintaining a 98% resolution rate and ensuring a seamless customer experience through efficient, empathetic communication workflows.
- Coordinate with internal teams to resolve complex customer concerns within defined timelines, leveraging React.js to provide clear visual data summaries for 50+ daily interactions.
- Implement rigorous peer code reviews and Git branching strategies for Node.js backend updates, reducing post-deployment bugs by 15% and ensuring system stability.
- Maintain accurate records of customer interactions in internal tracking systems, improving data retrieval efficiency by 20% for 4+ cross-functional project squads.

OneStop Virtual · Internship

Jan 2025 - Mar 2025

Artificial Intelligence Intern

Spearheaded advanced model testing and research initiatives, optimizing AI workflow reliability through robust debugging techniques and systematic performance validation across diverse datasets.

- Ran experiments using ML to validate new model performance for the research team
- Debugged Tensorflow code to keep our AI workflows reliable and error free
- Respond to customer inquiries and technical support requests using Tensorflow-based data dashboards, resolving 95% of queries within 24-hour defined timelines to drive customer satisfaction.

- Resolve customer complaints by identifying patterns in model failure logs, resulting in a 30% reduction in repeat ticket volume and improved resolution quality.
- Coordinate with internal teams to communicate experimental findings via professional communication channels, ensuring alignment with project goals across 3 distinct research groups.
- Enforce automated unit testing for AI workflows to validate performance, conducting daily peer reviews to ensure high-quality code and robust service delivery.

SmartBridge Educational Services Virtual · Internship

Jan 2025 - Mar 2025

AI & ML Intern

Engineered scalable AI algorithms and optimized data processing pipelines, fostering a high-performance environment through collaborative experimentation and systematic model tuning.

- Tuned foundational AI models to improve data processing accuracy for our core project goals
- Experimented with ML algorithms to gain a deeper understanding of how they interpret complex datasets
- Respond to customer inquiries regarding data processing accuracy, achieving high customer satisfaction by resolving technical discrepancies within 12-hour defined timelines.
- Maintain accurate records of experimental tuning results using Python, enabling 25% faster troubleshooting for internal teams during the model deployment phase.
- Deliver high customer satisfaction by providing empathetic communication and actionable insights on complex data interpretations for 10+ external educational partners.
- Meet quality and productivity benchmarks by managing complex multi-tasking workflows, effectively prioritizing urgent queries alongside foundational model training tasks.

AWARDS & ACHIEVEMENTS

Winner -- Elocution, Extempore Speech, Turncoat Debate & Press Meet (Tech Fest)

Winner -- Essay Writing & Drawing Competitions

Delivered TechTalk at Thimmayya Institute, KGF (2nd in Extempore, 3rd in Debate)

College Topper -- 2022, 2023, 2024

2024

PUBLICATIONS

Presented Paper at Kuppam Engineering College -- 2nd Prize

Presented Paper at Bargur Engineering College
